arXiv Business Planning Update

April 2011

It has been 15 months since we announced the collaborative arXiv business model. As we reported in our previous update, for 2010 we were pleased to receive support from 123 institutions, totaling to \$360,000 in contributions and representing 11 countries. We are encouraged with the contributions for 2011 as we already have support from 101 institutions, totaling to \$275,000 in pledges from 8 countries.

We are grateful for the coordinated international support from the Joint Information Systems Committee (JISC) Collections in the UK, SPARC-Japan, German National Library of Science and Technology (TIB), Helmholtz-Alliance Physics (Germany), and Denmark's Electronic Research Library (DEFF). We are currently contacting additional international library consortia for their possible leadership in coordinating support within some other countries.

One of the outcomes of our sustainability initiative will be the development of a new arXiv governance structure. We currently envision the formation of an independent Advisory Board, representative of arXiv's key stakeholders, including researchers, libraries, and funding agencies. We seek a structure that will provide guidance on arXiv policy, strategic direction, and priorities, as well as independent auditing and review. We are in the process of reviewing governance structures of similar initiatives and services. We invite your input and ideas, especially if you know of any successful model that we should be considering.

As part of our sustainability planning, we took a critical look at arXiv's technology infrastructure and prepared a high-level plan, which includes a major change to the discovery and access component of the platform. After having the proposal reviewed by four external colleagues with expertise in repository architectures, we decided to implement [Invenio](#) as the basis of a new display and access system. The move to Invenio will facilitate improved collaboration with our partners at [NASA ADS](#) and [INSPIRE](#), and reduce the maintenance burden of in-house code. We anticipate the transition, which will include a number of user interface enhancements, to be completed by mid-2012.

We often receive questions about the feasibility of providing submission-based statistics and comparing them with our current institutional downloads statistics. The author metadata for arXiv is not sufficiently consistent to support any systematic analysis but we ran some numbers based on submitting authors' email address affiliations. Based on sampling, we have some preliminary results, which indicate that submission- and download-based data exhibit similar characteristics. We continue to refine our findings and will appreciate ideas in regard to how this information can be used for business planning purposes. As part of the migration to Invenio, we will undertake some metadata remediation to improve the authorship data for existing submissions. This will enable better author linking, allow improvements in ownership claiming, and

pave the way to support author identity linking using the proposed [ORCID](#) author identifiers.

In collaboration with the [NSF Data Conservancy project](#) we have launched a pilot data upload interface for data associated with arXiv articles. Submission is unified through small extensions to arXiv's submission interface. While the article is announced and stored on arXiv, data is automatically deposited in the Data Conservancy repository and linked from the article (see http://arxiv.org/help/data_conservancy for more information). This is a pilot project, which will be re-evaluated in collaboration with the Data Conservancy by the end of this year.

As a part of our initiative, we are making an effort to closely monitor and document expenses associated with running arXiv. The [2011 budget](#) includes an in-kind contributions category to factor in a range of undocumented costs, such as indirect expenses associated with housing arXiv at Cornell.

We hope that our updates are keeping you informed of the developments. In order to respond to your questions and get your input, we will hold three conference calls and invite you to join one:

May 6, 11am EST

May 9, 4pm EST

May 13, 9:30am EST

We are very interested in understanding different perspectives on our business model efforts and welcome suggestions, criticisms, and encouragement! Please register at https://cornell.qualtrics.com/SE/?SID=SV_3E2claYbB2Mf6YI.

We thank all our supporters and welcome questions and suggestions.

arXiv Business Planning Team

Fiona Patrick, Oya Y. Rieger, David Ruddy, Simeon Warner
